

SIMPLE

When you need to withdraw water in very shallow rivers or streams, use the Elgin Water Solutions HemiScreen. Built with our redesigned flow modifier, the hemiscreen is low-profile and does not clog or kill fish.

The flow modifier within the HemiScreen minimizes hotspots across the screen. The improved velocity profile creates a screen that can meet EPA, NOAA, NMFS, and state regulations. Additionally, the same core technology that protects fish also prevents clogging

SAFE

If there is a high-debris or silt scenario, the HemiScreen can be integrated with a Elgin Water Solutions AirBurst, Sparger, or IceBreak System — allowing operation in a challenging environment.
